

Corda Enterprise for Independent Software Vendors (ISVs)

An Unmissable Opportunity for ISVs – and their Customers

Corda enables businesses to transact directly and in strict privacy, reducing transaction and record-keeping costs while streamlining business operations for businesses and their customers. Corda unlocks new potential for firms to expand their business, deliver new products to market faster, and transform the industries they operate in.

By embedding Corda technology—open source or enterprise—into their solutions, independent software vendors (ISVs) can help their customers link their existing applications securely and with assured synchronization, opening up a whole new world of industry-level collaboration.

More and more sectors are looking to tap into the power of blockchain.

“ We discovered that Corda was the only blockchain platform that would enable us to solve today’s issues, while also future-proofing the solution for tomorrow’s. ”

Helen Orton, Senior Product Manager, Finastra

Why build on the Corda platform?

Provides industry-leading tools and an environment for solution providers to focus on building value into their top-of-stack-applications.

Corda Enterprise contains the world’s only Blockchain Application Firewall, which enables it to be deployed inside corporate data centers, while retaining the ability to communicate securely with other nodes anywhere else in the world.

Legacy on-premises apps can be brought into the cloud and network age, boosting value by linking and synchronizing these apps with your clients.

Access to a network of fully interoperable blockchain-based applications known as CorDapps, developed by R3’s growing ecosystem of over 200 companies worldwide.

R3 works with customers and ISVs to help integrate the Corda platform within the business and ensures effective disaster recovery is in place so CorDapp partners can focus on customer acquisition.

Access to the Corda Network

Applications and services based on the Corda platform can run across the Corda Network—a common layer of identity and consensus determined by network participants. And, as the only blockchain platform in the world where an ISV and its customers can simultaneously participate in a global open network with strict privacy, Corda can act as the basis and catalyst for closer, more durable and commercially beneficial relationships to both sides. Solution providers using Corda in their offerings also gain access to a vibrant community of existing Corda customers willing to participate in co-creating solutions.

Corda and Corda Enterprise are fully interoperable, meaning that companies using either can trade with each other, and that an organization can run both platforms seamlessly across different divisions.

Contact

The blockchain opportunity for ISVs is expanding across many industries. Leverage the Corda platform to overcome your customers’ specific challenges, by contacting us at partner@r3.com.
